

LOWA FUSION® LO

BECAUSE WE KNOW HOW TO THREAD THE NEEDLE.

All of us have to recharge our batteries at the end of a tour. To make sure that this period of recuperation is as rejuvenating as possible, you should spoil your feet by slipping on a comfortable pair of shoes. If flip-flops or sandals aren't your thing, you can turn to the exceptionally snug model LOWA FUSION® LO, a shoe that fits like a sock and provides a maximum level of stress relief. Unlike your typical knitted shoe, LOWA's afterhike models bear the company's unmistakable outdoor mark. This includes features like the shoe's distinctive STABILITY FRAME, its cushioning LOWA-DynaPU® midsole and its grippy rubber outsole.

1 An outsole designed by LOWA with an optimised rubber compound to provide good grip.

2 The midsole has been specially adapted to the anatomy of the foot.

DYNAPU®

3 LOWA DynaPU® provides noticeable cushioning with every step.

WEIGHT

710 g/Pair (UK 8)

SUITABLE FOR

Strolls

The LOWA FUSION® LO is the perfect companion for outdoor strolls.

City tours

The LOWA FUSION® LO is perfect for activities in the city.

SOLE

LOWA® GT

The rubber sole LOWA® GT is characterised by its angular profile design. This feature provides a large contact surface and solid grip on easy terrain or during urban outings.

INSOLE

ca. 90 %

Polyurethane (PU)

Polyurethane (PU) is a soft plastic that has very good cushioning properties and is usually used in the midsole as a result. Through the use of PU, the soles become lightweight and functionally flexible.

ca. 10 %

Fabric

Our natural and synthetic fabrics facilitate optimal warming and moisture management with the help of their usage-specific characteristics. Thanks to their structural design, they are smooth and make our products extremely comfortable.

LINING MATERIAL

ca. 100 %

Unlined

FUNCTIONS

Avoidance of unnecessary stitches to reduce pressure points.

The single-injection midsole is directly injected onto the footwear.

A special frame design known as LOWA MONOWRAP® provides an extra degree of stability.

The footwear is flexible and supports natural rolling properties as a result.

UPPER MATERIAL

**ca. 100 %
knitted fabric**

Our woven upper is knitted from a single piece, a feature that enables the uppers fit like socks.

Various knitted patterns can be combined during the manufacturing process. As a result, certain areas are more tightly woven than others and create a structure that provides the foot with extra support. By contrast, other areas are more elastic and breathable.

PPE REGULATION

Please note that if it is intended to use the purchased products as personal protective equipment in accordance with Art. 3 No. 1 of Regulation (EU) 2016/425 (PPE Regulation), the user is responsible for checking the products for the presence of a corresponding certification (see technical data of the product). If the product lacks a certification required for use as personal protective equipment as defined by the PPE Regulation, the product may not be used as personal protective equipment or only for non-professional purposes.
