

TICAM EVO GTX

THE VERSATILE TREKKING EXPERTS FOR AMBITIOUS MOUNTAINEERS.

1 Footwear equipped with a GORE-TEX membrane is reliably waterproof, windproof and breathable.

2 Proven Vibram rubber sole from a high-quality provider from Italy.

3 The forefoot and upper area can be laced in varying degrees of tightness.

4 Special fastening hooks divide the lacing system into two zones so they can be independently locked in place.

5 Holds the tongue in place with the help of the laces and prevents slippage in the process.

6 Increased flexibility of the upper for pleasant walking.

7 Special tongue construction with asymmetric padding for even pressure distribution.

You can spot a trekking boot that has pronounced alpine genes right away. Boots like the TICAM EVO GTX model. With its partially crampon-compatible Vibram soles and waterproof GORE-TEX lining, the shoe has what it takes to reach lofty heights. At the same time, it can excel on less challenging terrain as well: exceptional walking comfort, optimal rolling properties and a perfect fit.

SUITABLE FOR

Mountain hiking

The TICAM EVO GTX is ideal for mountain hiking. This involves a tour in mountainous terrain.

Multi-day hikes

A multi-day hike involves a tour with a backpack that lasts for more than 24 hours. The TICAM EVO GTX is the perfect footwear for such hikes.

Pilgrim hiking

A pilgrim hike is a long-distance journey by foot that is motivated by spiritual needs. The TICAM EVO GTX is a good travel companion on such tours.

Long-distance hiking

The TICAM EVO GTX is perfect for long-distance hiking. It involves covering a great distance on foot over a period of several days.

Day hikes

The TICAM EVO GTX is perfect for day hikes. These outings last for less than 24 hours and lead back to the starting point.

Approaches

The approach boot TICAM EVO GTX is perfect for the hike to the starting point of the actual via ferrata or climbing tour.

SOLE

VIBRAM ALP TRAC® NUMEN

The performance sole VIBRAM ALP TRAC® NUMEN is designed especially for alpine conditions. The large "climbing zone" on the sole tip enables wearers to move precisely as they manoeuvre their way up sheer rock faces. The stud arrangement ensures that any dirt that accumulates in the sole of the footwear will be shaken loose while the boot wearer is walking.

MIDSOLE

ca. 80 % Polyurethane (PU)

Polyurethane (PU) is a soft plastic that has very good cushioning properties and is usually used in the midsole as a result. Through the use of PU, the soles become lightweight and functionally flexible.

ca. 20 % Thermoplastic polyurethane

Thermoplastic polyurethane (TPU) is like classic polyurethane in many ways. But it differs from it in one special aspect: the process used to produce it. As a result, TPU is more abrasion and slip resistant. It also has a very high degree of kink and tensile strength. Thanks to improved weather resistance, the qualities of a sole made from TPU are more constant even when temperatures fluctuate, an especially important aspect of our leisure-time winter models.

INSOLE

ca. 40 % Polyester

Polyester is synthetic plastic fibre made from crude oil. In chemical terms, it is a polymer that can be processed into many different materials. Thanks to its chemical flexibility, polyester is lightweight, dries quickly, does not shrink and has the highest levels of tear and abrasion resistance.

ca. 50 % Viscoelastic latex foam

Viscoelastic latex foam is made of a remarkable polymer that lends a special form memory to the foam. Once body heat or pressure is applied to the viscoelastic foam, the foam adapts exactly to these particular contours. This feature equally distributes pressure and eases stress on the feet.

ca. 10 % Mesh

Mesh is a material that consists of many evenly spaced holes. It is usually made of polyester or nylon and basically a lattice-like material that is created by interwoven threads. Thanks to its special design, the man-made fibre is particularly permeable to air, has special moisture-regulating qualities and is easy to care for, breathable and crease-resistant.

FUNCTIONS

A specially constructed component in the area of the sole tip for precise performance during easy climbs.

Roller eyelets make for easy lacing.

Upper design with freely moving lace hooks and lacing systems.

As a result of its construction, the footwear exhibits a strong resistance to bending.

UPPER MATERIAL

ca. 100 %

Suede leather

Suede leather comes from the flesh side of the hide. It has a looser fibre structure, a quality that creates a velvety surface and a light pile. Suede leather is particularly durable and open-pored. Depending on the desired look, suede leather can remain untreated or be oiled or waxed.
