

## VAJOLET GTX MID

### MOUNTAINEERING ADVENTURES ALL YEAR ROUND.

One for all? What at first sounds like mission impossible for many mountaineering fans, turns out on closer inspection to be a classic mountain boot for year-round use. Whether you are setting out on an alpine hike, a via ferrata ascent or a high-altitude tour, the new VAJOLET GTX MID is the perfect companion for every outdoor adventure. Semi-crampon compatible, resoleable and fitted with a carbon-reinforced shank, this waterproof all-rounder is the ideal team mate for demanding mountain expeditions in eternal ice or rocky terrain.

**1** Footwear equipped with a GORE-TEX membrane is reliably waterproof, windproof and breathable.

**2** Proven Vibram rubber sole from a high-quality provider from Italy.

**3** The forefoot and upper area can be laced in varying degrees of tightness.

**4** Special fastening hooks divide the lacing system into two zones so they can be independently locked in place.

**5** Holds the tongue in place with the help of the laces and prevents slippage in the process.

## COLOURS

Black/flame  
211085 9960

## WEIGHT

1570 g/Pair (UK 8)

## SUITABLE FOR

### Mountain hiking

The VAJOLET GTX MID is ideal for mountain hiking. This involves a tour in mountainous terrain.

### Ice and mixed climbing

The VAJOLET GTX MID is ideal for ice and mixed climbing on ice formations or combined terrains consisting of rock and ice.

### Expeditions

The VAJOLET GTX MID is perfect for expeditions into remote or unexplored regions.

### High-altitude tours

High-altitude tours take adventurers to areas that remain ice-covered throughout the entire year. High-altitude tours require special preparation and equipment like the model VAJOLET GTX MID.

### Via ferrata

The VAJOLET GTX MID is perfect for a via ferrata. It's a climbing route secured with iron ladders, iron pegs, rungs and cables built on natural or artificial rock.

### Approaches

The approach boot VAJOLET GTX MID is perfect for the hike to the starting point of the actual via ferrata or climbing tour.

## SOLE

### VIBRAM ALP TRAC® NUMEN

The performance sole VIBRAM ALP TRAC® NUMEN is designed especially for alpine conditions. The large "climbing zone" on the sole tip enables wearers to move precisely as they manoeuvre their way up sheer rock faces. The stud arrangement ensures that any dirt that accumulates in the sole of the footwear will be shaken loose while the boot wearer is walking.

## MIDSOLE

**ca. 80 %**

### **Polyurethane (PU)**

Polyurethane (PU) is a soft plastic that has very good cushioning properties and is usually used in the midsole as a result. Through the use of PU, the soles become lightweight and functionally flexible.

**ca. 20 %**

### **Thermoplastic polyurethane**

Thermoplastic polyurethane (TPU) is like classic polyurethane in many ways. But it differs from it in one special aspect: the process used to produce it. As a result, TPU is more abrasion and slip resistant. It also has a very high degree of kink and tensile strength. Thanks to improved weather resistance, the qualities of a sole made from TPU are more constant even when temperatures fluctuate, an especially important aspect of our leisure-time winter models.

## INSOLE

**ca. 50 %**

### **Viscoelastic latex foam**

Viscoelastic latex foam is made of a remarkable polymer that lends a special form memory to the foam. Once body heat or pressure is applied to the viscoelastic foam, the foam adapts exactly to these particular contours. This feature equally distributes pressure and eases stress on the feet.

**ca. 40 %**

### **Polyester**

Polyester is synthetic plastic fibre made from crude oil. In chemical terms, it is a polymer that can be processed into many different materials. Thanks to its chemical flexibility, polyester is lightweight, dries quickly, does not shrink and has the highest levels of tear and abrasion resistance.

**ca. 10 %**

### **Mesh**

Mesh is a material that consists of many evenly spaced holes. It is usually made of polyester or nylon and basically a lattice-like material that is created by interwoven threads. Thanks to its special design, the man-made fibre is particularly permeable to air, has special moisture-regulating qualities and is easy to care for, breathable and crease-resistant.

## FUNCTIONS

A specially constructed component in the area of the sole tip for precise performance during easy climbs.

The low height of the sole creates stable footing on uneven terrain.

The special design of the toe area enables wearers to climb with precision even on the edges of the smallest rocks.

Roller eyelets make for easy lacing.

Increased flexibility of the upper for pleasant walking.

Upper design with freely moving lace hooks and lacing systems.

The footwear exhibits very strong resistance to bending.

Special tongue construction with asymmetric padding for even pressure distribution.

## UPPER MATERIAL

### ca. 20 % Synthetic

Our synthetic fabrics made of such plastics as nylon, polyester, polypropylene and elastane (Lycra) are primarily used as design elements and protection for the upper due to their abrasion resistance and tear strength.

### ca. 80 % Fabric

Our natural and synthetic fabrics facilitate optimal warming and moisture management with the help of their usage-specific characteristics. Thanks to their structural design, they are smooth and make our products extremely comfortable.
