

CORVARA GTX MID

NO CORNERS CUT – EXCEPT IN WEIGHT

The CORVARA GTX MID is a modern trekking boot with a low weight that will particularly appeal to the athletic outdoor enthusiast. The upper material mix - a combination of suede and textile - allows maximum performance on the mountain without compromising on its resistance to coarse stones and sharp-edged rocks. A tough polyurethane rubber band on the heel and toe takes care of the rest. In addition, the new VIBRAM CORNERSTONE outsole with a pronounced heel edge and defined tread pattern provides excellent grip on rough terrain.

1 Footwear equipped with a GORE-TEX membrane is reliably waterproof, windproof and breathable.

2 Proven Vibram rubber sole from a high-quality provider from Italy.

3 The forefoot and upper area can be laced in varying degrees of tightness.

4 Increased flexibility of the upper for pleasant walking.

SUITABLE FOR

Mountain hiking

The CORVARA GTX MID is ideal for mountain hiking. This involves a tour in mountainous terrain.

Approaches

The approach boot CORVARA GTX MID is perfect for the hike to the starting point of the actual via ferrata or climbing tour.

Multi-day hikes

A multi-day hike involves a tour with a backpack that lasts for more than 24 hours. The CORVARA GTX MID is the perfect footwear for such hikes.

Pilgrim hiking

A pilgrim hike is a long-distance journey by foot that is motivated by spiritual needs. The CORVARA GTX MID is a good travel companion on such tours.

Long-distance hiking

The CORVARA GTX MID is perfect for long-distance hiking. It involves covering a great distance on foot over a period of several days.

Day hikes

The CORVARA GTX MID is perfect for day hikes. These outings last for less than 24 hours and lead back to the starting point.

SOLE

VIBRAM CORNERSTONE

The VIBRAM CORNERSTONE sole has a modern profiled sole design with distinctive edges on the lugs, which provide the necessary traction in the forefoot area and grip in the heel area in varying terrain. These good properties are reinforced by the very pronounced heel edge, which increases the braking effect, especially downhill.

MIDSOLE

ca. 100 %

Polyurethane (PU)

Polyurethane (PU) is a soft plastic that has very good cushioning properties and is usually used in the midsole as a result. Through the use of PU, the soles become lightweight and functionally flexible.

INSOLE

ca. 10 %

Mesh

Mesh is a material that consists of many evenly spaced holes. It is usually made of polyester or nylon and basically a lattice-like material that is created by interwoven threads. Thanks to its special design, the man-made fibre is particularly permeable to air, has special moisture-regulating qualities and is easy to care for, breathable and crease-resistant.

ca. 90 %

Polyurethane (PU)

Polyurethane (PU) is a soft plastic that has very good cushioning properties and is usually used in the midsole as a result. Through the use of PU, the soles become lightweight and functionally flexible.

FUNCTIONS

Avoidance of unnecessary stitches to reduce pressure points.

DYNA^{PU}®

LOWA DynaPU®+ has a very high level of recovery behaviour. The highly elastic features maintain their properties for a very long period of time.

The shoe is moderately stiff.

UPPER MATERIAL

ca. 70 %

Suede leather

Suede leather comes from the flesh side of the hide. It has a looser fibre structure, a quality that creates a velvety surface and a light pile. Suede leather is particularly durable and open-pored. Depending on the desired look, suede leather can remain untreated or be oiled or waxed.

ca. 30 %

Fabric

Our natural and synthetic fabrics facilitate optimal warming and moisture management with the help of their usage-specific characteristics. Thanks to their structural design, they are smooth and make our products extremely comfortable.

PPE REGULATION

Please note that if it is intended to use the purchased products as personal protective equipment in accordance with Art. 3 No. 1 of Regulation (EU) 2016/425 (PPE Regulation), the user is responsible for checking the products for the presence of a corresponding certification (see technical data of the product). If the product lacks a certification required for use as personal protective equipment as defined by the PPE Regulation, the product may not be used as personal protective equipment or only for non-professional purposes.
