

## CADIN II GTX MID MULTIFACETED IN EVERY AREA.

A shoe that's sure to turn heads. Particularly on Alpine terrain, on rock or on your way there: The CADIN II GTX MID is simply an athletic jack-of-all-trades. Its multifaceted qualities are well-known and well-loved by mountaineers. This popularity is the result not only of the boot's welts for semi-automatic crampons, but also its Vibram outsole. It's simply perfect for almost any conditions you might encounter when mountaineering. Besides being functional, a mountaineering boot has to look good. The CADIN II GTX MID has its own special eye-catchers, including its scree collar and its integrated embossing that creates a special mountaineering boot style.

**1** Footwear equipped with a GORE-TEX membrane is reliably waterproof, windproof and breathable.

**2** Proven Vibram rubber sole from a high-quality provider from Italy.

**3** The forefoot and upper area can be laced in varying degrees of tightness.

**4** Holds the tongue in place with the help of the laces and prevents slippage in the process.

**5** Increased flexibility of the upper for pleasant walking.

## COLOURS

## WEIGHT

1470 g/Pair (UK 8)

## SUITABLE FOR

### Mountain hiking

The CADIN II GTX MID is ideal for mountain hiking. This involves a tour in mountainous terrain.

### Via ferrata

The CADIN II GTX MID is perfect for a via ferrata. It's a climbing route secured with iron ladders, iron pegs, rungs and cables built on natural or artificial rock.

### Ice and mixed climbing

The CADIN II GTX MID is ideal for ice and mixed climbing on ice formations or combined terrains consisting of rock and ice.

### Expeditions

The CADIN II GTX MID is perfect for expeditions into remote or unexplored regions.

### High-altitude tours

High-altitude tours take adventurers to areas that remain ice-covered throughout the entire year. High-altitude tours require special preparation and equipment like the model CADIN II GTX MID.

### Approaches

The approach boot CADIN II GTX MID is perfect for the hike to the starting point of the actual via ferrata or climbing tour.

## SOLE

### VIBRAM ALP TRAC® NUMEN

The performance sole VIBRAM ALP TRAC® NUMEN is designed especially for alpine conditions. The large "climbing zone" on the sole tip enables wearers to move precisely as they manoeuvre their way up sheer rock faces. The stud arrangement ensures that any dirt that accumulates in the sole of the footwear will be shaken loose while the boot wearer is walking.

## MIDSOLE

**ca. 80 %  
Polyurethane (PU)**

Polyurethane (PU) is a soft plastic that has very good cushioning properties and is usually used in the midsole as a result. Through the use of PU, the soles become lightweight and functionally flexible.

**ca. 20 %  
Thermoplastic  
polyurethane**

Thermoplastic polyurethane (TPU) is like classic polyurethane in many ways. But it differs from it in one special aspect: the process used to produce it. As a result, TPU is more abrasion and slip resistant. It also has a very high degree of kink and tensile strength. Thanks to improved weather resistance, the qualities of a sole made from TPU are more constant even when temperatures fluctuate, an especially important aspect of our leisure-time winter models.

## INSOLE

**ca. 40 %  
Polyester**

Polyester is synthetic plastic fibre made from crude oil. In chemical terms, it is a polymer that can be processed into many different materials. Thanks to its chemical flexibility, polyester is lightweight, dries quickly, does not shrink and has the highest levels of tear and abrasion resistance.

**ca. 50 %  
Viscoelastic latex foam**

Viscoelastic latex foam is made of a remarkable polymer that lends a special form memory to the foam. Once body heat or pressure is applied to the viscoelastic foam, the foam adapts exactly to these particular contours. This feature equally distributes pressure and eases stress on the feet.

**ca. 10 %  
Mesh**

Mesh is a material that consists of many evenly spaced holes. It is usually made of polyester or nylon and basically a lattice-like material that is created by interwoven threads. Thanks to its special design, the man-made fibre is particularly permeable to air, has special moisture-regulating qualities and is easy to care for, breathable and crease-resistant.

## FUNCTIONS

A specially constructed component in the area of the sole tip for precise performance during easy climbs.

As a result of its construction, the footwear exhibits a strong resistance to bending.

## UPPER MATERIAL

**ca. 80 %  
Suede leather**

Suede leather comes from the flesh side of the hide. It has a looser fibre structure, a quality that creates a velvety surface and a light pile. Suede leather is particularly durable and open-pored. Depending on the desired look, suede leather can remain untreated or be oiled or waxed.

**ca. 20 %  
Fabric**

Our natural and synthetic fabrics facilitate optimal warming and moisture management with the help of their usage-specific characteristics. Thanks to their structural design, they are smooth and make our products extremely comfortable.
